

20 SPORTS AND LEISURE ACTIVITIES IN THE ENVIRONMENT

GEOTREKKING GETTING TO KNOW THE ROCKS

PROGRAMME

Rocks, stones and giant rock formations are rich in history and can reveal the earth's deepest secrets.

Geology involves several sites at Friulian Dolomites Natural Park, which offers a variety of different views and rocks.

- Meet with the nature guide in Claut piazza (PN).
Rocks tell stories all over Friulian Dolomites Natural Park. At Cellina and Molassa gorges, for example, visitors can find fascinating smooth rocks unearthed by the water that have clambered to a height. Monte Dosàip also has some very particular conformations. Stories about stones become more numerous along the Periadriatic Seam in Andreis. And in Claut, fossil footprints tell the story of ancient dinosaurs. In Erto e Casso, giant one-of-a-kind books are hidden among the summit of Monte Borgà: stone slabs sit on top of one another, and visitors can learn about the earth's history by reading between the lines.
Geotrekking gives visitors the opportunity to find out more about the various types of rocks, and identify and catalogue them in order to understand the origins of one of the most beautiful UNESCO heritage sites in the world.

- Packed lunch in the surrounding area.
- Option to participate in laboratories and experiments.

LENGTH OF TIME

- Full day, adaptable half-day
*Activities will be suspended if it is raining.
The programme can be changed according to the group's needs.*

MATERIALS REQUIRED FOR THE ACTIVITY

- Hiking boots or sturdy trainers and appropriate clothing for a mountain hike.
- Waterproof jacket
